

1. Core Python Basics

- Variables & Data Types
 - Type Conversion
 - Input/Output
 - Operators
 - Conditional Statements (`if-else`)
 - Loops (`for`, `while`)
 - List Comprehensions
 - Basic String Manipulation
-

2. Data Structures (Very Important)

2.1 Lists

- Insert/delete operations
- Slicing
- Sorting
- Nested lists
- List comprehension
- Time complexity of operations

2.2 Tuples

- When to use vs list
- Immutable behavior

2.3 Dictionaries

- Key lookup complexity
- Inverting a dictionary
- Grouping problems
- Counting frequency

2.4 Sets

- Union, intersection
- Removing duplicates
- Membership testing

3. Functions & Scope

- Function arguments (`*args`, `**kwargs`)
- Lambda functions
- Map / Filter / Reduce
- Recursion
- Closures
